Seminar/Webinar on: How ChatGPT and Hyper-Automation can help you transform your business?

28 April 2023 from 6pm to 7pm

Introduction	Hyper-automation is not a new term in the industry. With the breakthrough of the deep learning technology such as GPT-3, hyper-automation can be empowered by this kind of the state-of-art technology to deliver the sophisticated automation solutions to the users. Most of the manual repetitive tasks may be completed by hyper-automation. In addition, it can also guarantee the process compliance. In the seminar, we have a brief discussion of the technology of Robotic Process Automation (**RPA**) and will discuss some of the real use cases to investigate how hyper-automation can help you transform your business. We will also discuss how to implement **ChatGPT** in the hyper-automation solution to automate some of the business processes.
